shal Neil, Radiance, Red Radiance.)

	Each	10
Medium	.40	5.50
Heavy	.70	6.50

PLANTING INSTRUCTIONS.

Set trees of all kinds the same depth they stood in the nursery. Use sharp knife to prune off all extra long and bruised roots. Have hole just wide enough to accommodate all roots without cramping. In digging holes keep clay and top soil separate. Fill in with good top soil. Keep roots well spread as this is very important, especially with all citrus trees. Pack well from the start. Fertilizer should only be applied to the spring and summer plantings, worked into the soil 18in. to 2ft. from the tree.

Owari Satsuma Orange

Duncan Grapefruit

When remittance comes with order state calendar
pay all transportation charges on
citrus trees at prices quoted below.The most important thing about any
tree is a good root system. All our
pecan and citrus stock is on four
and five year roots. Trees have been
well cared for and are as good as
can be grown. Citrus all on Trifolia-lata stock which will stand zero
temperature without injury.Plant pecans 50x50ft. Plant citrus
on Trifolia stock 18 to 25 ft
each way.

50x50	17

ontic Ilo, Il. Au. 9 1972

Mr. & Mrs. Williams,
Inverness,

I would like to have information in
connection with your tree service
company's cutting off live foliage. Any kind of
information would help me with it.

Very truly yours,

John W. Mohr
